

# COLAB NOTEBOOK

A Colab notebook is an online environment where you can write and run Python code right in your browser, with free access to GPUs and easy sharing.

Here are the main things you can do with a Colab notebook:

- Create and run Python code: Write code in cells and execute them interactively.
- Use free GPUs/TPUs: Great for machine learning and deep learning projects.
- Collaborate easily: Share notebooks just like Google Docs, with comments and edits.
- Import data from Google Drive or GitHub: Seamlessly connect to your files and repositories.
- Visualize data: Generate charts, plots, and interactive outputs directly in the notebook.
